

Some prolog code

```
application(AppId, [Functions], [Services]).
```

Some prolog code with numbered lines

```
1 fogBrain(App, NewPlacement) :-  
2   deployment(App, Placement, AllocHW, AllocBW),  
3   reasoningStep(App, Placement, AllocHW, AllocBW, NewPlacement).  
4   veryveryveryveryveryveryveryveryveryveryveryveryveryveryveryveryLongPredicate(A, B, C, D,  
    ↪ E, F, G, H, I).  
5 fogBrain(App, Placement) :-  
6   \+ deployment(App,_,_,_),  
7   placement(App, Placement).
```

N.B. If using minted v2, and you want to pass options, use the starred environment, as follows:

```
application(AppId, [Functions], [Services]).
```

This works with minted v3 as well, but is not necessary. For v3 use the version above.
